About the CCFG
The Continuous Cover Forestry Group was founded in 1991. Our primary objectives are to promote the transformation of even-aged plantations to structurally, visually and biologically diverse woodlands, and to promote the sustainable management of high quality timber. We play a key role in training and education, and are influential in the formulation of new forest policies in England, Wales and Scotland. We have over 200 individual and corporate members, and membership is open to all with an interest in forestry, forest conservation and woodland environments. The CCFG website gives more information and membership details.
